Snowmaking

There is currently no snowmaking at the ski area. It is proposed that snowmaking would be introduced over a small portion of the terrain, limited to the half pipe and an area surrounding the base terminals of the Skyline and Hogsback lifts. The system would utilize an existing water right (0.1 c.f.s) on Brooks Creek, using a weir and large diameter supply pipe for water storage and delivery. This system will have enough flow to warrant 2 to 4 high efficiency snow guns. The proposed coverage is approximately 18 acres, as illustrated in Figure 4-9.
